# ZHANBO (Dylan) DAI

680-216-2614 | zhanbodai@outlook.com | www.linkedin.com/in/zhanbo-dai

## EDUCATION

**University of Wisconsin-Madison** Madison, WI

***Master of Science,* Data Science** *Expected May 2027*

**Relevant Coursework:** SQL and Relational Database Management System, Storytelling with Dashboard, Big Data Systems (Hadoop, Spark), Statistical Learning (Machine Learning), Statistical Models for Data Science, Statistical Inference

***Bachelor of Science,* Economics with Math emphasis** | Minor: Data Science *May 2025*

**Relevant Coursework:** Data Visualizations, Game Theory & Economic Analysis, Econometrics with AI and Machine Learning, Know Your Customer, Financial Analytics, Risk Assessment, Anti-Money Laundering, Financial Crime Prevention

## PROFESSIONAL EXPERIENCE

**Wisconsin Union** Madison, WI

***Student Catering Supervisor*** *Aug 2026 – Present*

- Supervise student catering staff while performing regular service duties, coordinating team activities to keep university events running smoothly and support the manager throughout event execution.
- Delivered a comprehensive report via Power BI dashboard to stakeholders regarding menu planning and costing, menu planning and costing, and forecasting based on FoodPRO, supporting data-driven decisions from the senior management team.
- Assist the manager by preparing and printing event signage and maintaining real-time radio communication to relay updates, coordinate service needs, and address on-site issues.

***Caterer*** *Sep 2023 – Aug 2026*

- Translated inventory and event-demand data into operational insights, helping managers anticipate supply needs, maintain product availability, and improve planning across recurring catering events.
- Served at large-scale university events (weddings, commencement banquets, Badger Bash) ranging from small private dinners to events serving 1,000+ guests, adapting to high-pressure service environments.
- Analyzed historical inventory and event demand data to forecast supply requirements for recurring university events, helping managers align purchasing decisions with expected guest volume and service needs.

**Shanghai Xinhua Lian Co., Ltd.** Shanghai, China

***Marketing Data Intern*** *Jul 2025 – Aug 2025*

- Designed and executed on-site QR -code data collection across target demographics, improving response coverage and building a reliable dataset for customer segmentation and campaign analysis
- Detected sampling bias in questionnaire data, showing that low Gen-Z response rates overrepresented Gen-X customers and distorted conclusions about the mall's actual target audience by analyzing the data extracted from the database via SQL.
- Improved survey methodology by targeting Gen-Z respondents with tailored outreach and incentives such as LABUBU figurines, reducing sampling bias and strengthening data quality for customer segmentation analysis.

**Bank of China** Shanghai, China

***Operation Data Intern*** *May 2023 – Aug 2023*

- Built structured Excel trackers for onboarding activities and team meetings, improving information organization, searchability and visibility into key dates, topics, and follow-up items.
- Identified repetitive onboarding pain points and developed reusable instructional videos, standardizing knowledge transfer and reducing reliance on repeated 1:1 training and explanation.
- Supported process improvement by combining structured data management, documentation, and self-service training materials to improve onboarding consistency and day-to-day team efficiency.

## PROJECT EXPERIENCE

**Distributed Big Data Analytics System,** *Big Data Systems*

- Built a scalable data pipeline using Apache Spark (PySpark) and Hive on a distributed HDFS cluster to analyze large-scale datasets, optimizing query performance through data bucketing and caching
- Implemented a machine learning pipeline using Spark MLlib (Decision Trees) to predict missing dataset features, and integrated Gemini API to convert natural language queries into executable Spark SQL
- Developed fault-tolerant microservices using gRPC and Docker, utilizing Parquet columnar storage to optimize I/O efficiency and handling data node failures with automated recovery logic

## SKILLS

- **Programming Languages:** SQL (Subquery, Windows Function), Python (numpy, pandas), RStudio (dplyr, ggplot), Stata
- **Frameworks & Tools:** Power BI, Tableau, Google Analytics, Hadoop, Apache Spark, LaTeX
- **Technical Skills:** Artificial Intelligence, Vibe Coding, Prompt Engineering, AI Governance
